Presbyopia Correction of a Higher Order

Introducing the TECNIS® Multifocal IOL. The first and only pupil independent, full diffractive, wavefront-designed aspheric lens that corrects spherical aberration to essentially zero and reduces chromatic aberration.

High-quality vision in any light condition
- Near, far, and intermediate: Excellent vision day or night
- Proprietary non-apodized optic and proven clear hydrophobic acrylic for best image quality

Exceptionally high patient satisfaction
- Over 94% of patients:
  - Achieve simultaneous 20/25 or better distance and 20/32 or better near
  - Function comfortably without glasses for ALL distances, including intermediate
  - Would choose the TECNIS® Multifocal IOL again
- Nearly 9 out of 10 patients NEVER wear glasses
- Low-light reading speed is twice as fast compared to ReSTOR® IOL
- Delivers a predictable and consistent full range of vision with less halos than other PC-IOLs
Clinical Data Comparison

Data from the US clinical trial demonstrate that the TECNIS® Multifocal IOL provides better performance and extremely high patient satisfaction compared to the ReSTOR® Aspheric IOL.²,４

The study shows that the TECNIS® Multifocal IOL consistently delivers high-quality vision with reports of less halos and glare than other presbyopia-correcting IOls for optimal visual results.²,４,５

* Satisfaction scale 0-4: 0 = not at all satisfied, 4 = completely satisfied
¹ Based on the subjects’ responses when asked, “Are you having any difficulties with your eyes or vision?”

Excellent Full Range of Vision

Only the TECNIS® Multifocal IOL is a full diffractive aspheric lens that enables patients to function comfortably without glasses at near, intermediate, and distance² and provides superior functional near vision demonstrated by reading speed comparisons.³
